B10 Practice Platform (B10-PP) — Product Specification

Version: 0.1 (Draft — In Progress) **Author:** Jeff Moore, DLIELC **Date:** March 2026 **Status:** DRAFT — Sections marked [APPROVED] are locked; all others pending review

---

SECTION 1 — PRODUCT IDENTITY AND PURPOSE

1.1 Product Name and Designation

- **Full name:** B10 Practice Platform
- **Short name / code:** B10-PP
- **Predecessor tool:** Snorkl (currently in use, $120/month out-of-pocket; B10-PP is its replacement)

1.2 Institutional Context

B10-PP is developed by and for the Defense Language Institute English Language Center (DLIELC), San Antonio, Texas. It supports the B10 ILR 2→2+ Listening Practice Project, a scaffolded listening development system for international military students targeting ILR 2+ to ILR 3 proficiency.

B10-PP is **not** an OPI replacement. It is a formative practice and feedback platform aligned to the B10 passage corpus and scoring rubric.

1.3 Target Users

Role	Description
Student	International military adult learner, current ILR 2, targeting ILR 2+/3. No single target L1. Uses B10-PP for independent or in-class listening practice.
Instructor	ESL/ILR proficiency instructor at DLIELC. Creates class codes, assigns passage sets, monitors student scores via dashboard.

1.4 Core Purpose

B10-PP provides:

1. **Listening exposure** — students listen to B10 passages (CORE, EXT, or ORIENT layer) delivered as pre-generated audio (Azure TTS MP3s)
2. **Spoken response practice** — students record oral responses (paraphrase, ESO, or hypothetical/conditional) in the browser
3. **AI-powered scoring and feedback** — Claude API scores responses against the B10 4-point rubric and returns structured formative feedback
4. **Instructor visibility** — all session scores are accessible to the instructor via a class dashboard

1.5 What B10-PP Is NOT

- Not a multiple-choice platform (no MC items, ever)
- Not an ILR assessment tool (formative practice only)
- Not a server-dependent system (MVP is serverless; GitHub Pages + browser localStorage + third-party APIs)
- Not a replacement for human ILR evaluation or OPI

1.6 Deployment Target

- **Hosting:** GitHub Pages (static PWA)
- **Client OS compatibility:** Primary — Windows, Linux Mint; Secondary — iOS, Android (browser-based)
- **No native app install required** (Progressive Web App; installable but not required)

1.7 Development Model

B10-PP is built under the **Director Model**:

- Jeff Moore (DLIELC) = domain expert, spec author, quality gate, product director
- Claude Code = builder (iterative, checkpoint-based, spec-driven)
- No continuous hands-on coding by Jeff; redirections occur at defined review checkpoints
